ABSTRACT OF THE DISCLOSURE

The present invention provides an assay method for detecting infectious prion protein in a sampel from a mammalian subject, said method comprising: obtaining a prion protein containing sample from said subject; contacting siad sample with an agent which serves to digest non-infectious prion protein and to partially digest infected prion protein to yield a prion protein polypeptide residue; contacting the digested sample with an antibody capable of binding to a poly peptide having the amino acid sequence Vc (Gly-Gly-Gly-Trp)-Gly-Gln-Gly-Gly-R₁-R₂-His-R₃-Gln-Trp-Asn-Lys-Pro-Lys-R₄-Lys-Pro-Lys-Thr-R₅-R₆-Lys (-His-R₇-Ala-Gly) (Vc) and detecting conjugates of said antibody and said prion protein polypeptide residue; characterized in that the detection of said conjugates comprises chemical, biological or biochemical amplification of a detectable species and detection of the amplified species.
